

IMPORTANT RISK DISCLOSURE

Futures and forex trading is complex and carries the risk of substantial losses. It is not suitable for all investors. The ability to withstand losses and to adhere to a particular trading program in spite of trading losses are material points which can adversely affect investor returns.

The returns for trading systems listed on the iSystems Platform are hypothetical in that they represent returns in a model account. The model account rises or falls by the average single contract profit and loss achieved by clients trading actual money pursuant to the listed system's trading signals on the appropriate dates (client fills), or if no actual client profit or loss available – by the hypothetical single contract profit and loss of trades generated by the system's trading signals on that day in real time (real-time) less slippage, or if no real time profit or loss available – by the hypothetical single contract profit and loss of trades generated by running the system logic backwards on backadjusted data (backadjusted).

The hypothetical model account begins with the initial capital level listed, and is reset to that amount each month. The percentage returns reflect inclusion of commissions, fees, slippage, and the cost of the system. The monthly cost of the system is subtracted from the net profit/loss prior to calculating the percentage return.

If and when a trading system has an open trade, the returns are marked to market on a daily basis, using the backadjusted data available on the day the computer backtest was performed for backtested trades, and the closing price of the then front month contract for real time and client fill trades. For a trade which spans months, therefore, the gain or loss for the month ending with an open trade is the marked to market gain or loss (the month end price minus the entry price, and vice versa for short trades).

The actual percentage gains/losses experienced by investors will vary depending on many factors, including, but not limited to: starting account balances, market behavior, the duration and extent of investor's participation (whether or not all signals are taken) in the specified system and money management techniques. Because of this, actual percentage gains/losses experienced by investors may be materially different than the percentage gains/losses as presented on this website.

Please read carefully the CFTC required disclaimer regarding hypothetical results below. HYPOTHETICAL PERFORMANCE RESULTS HAVE MANY INHERENT LIMITATIONS, SOME OF WHICH ARE DESCRIBED BELOW. NO REPRESENTATION IS BEING MADE THAT ANY ACCOUNT WILL OR IS LIKELY TO ACHIEVE PROFITS OR LOSSES SIMILAR TO THOSE SHOWN; IN FACT, THERE ARE FREQUENTLY SHARP DIFFERENCES BETWEEN HYPOTHETICAL PERFORMANCE RESULTS AND THE ACTUAL RESULTS SUBSEQUENTLY ACHIEVED BY ANY PARTICULAR TRADING PROGRAM. ONE OF THE LIMITATIONS OF HYPOTHETICAL PERFORMANCE RESULTS IS THAT THEY ARE GENERALLY PREPARED WITH THE BENEFIT OF HINDSIGHT. IN ADDITION, HYPOTHETICAL TRADING DOES NOT INVOLVE FINANCIAL RISK, AND NO HYPOTHETICAL TRADING RECORD CAN COMPLETELY ACCOUNT FOR THE IMPACT OF FINANCIAL RISK OF ACTUAL TRADING. FOR EXAMPLE, THE ABILITY TO WITHSTAND LOSSES OR TO ADHERE TO A PARTICULAR TRADING PROGRAM IN SPITE OF TRADING LOSSES ARE MATERIAL POINTS WHICH CAN ALSO ADVERSELY AFFECT ACTUAL TRADING RESULTS. THERE ARE NUMEROUS OTHER FACTORS RELATED TO THE MARKETS IN GENERAL OR TO THE IMPLEMENTATION OF ANY SPECIFIC TRADING PROGRAM WHICH CANNOT BE FULLY ACCOUNTED FOR IN THE PREPARATION OF HYPOTHETICAL PERFORMANCE RESULTS AND ALL WHICH CAN ADVERSELY AFFECT TRADING RESULTS.

The information contained in the reports within this site is provided with the objective of "standardizing" trading systems account performance and is intended for informational purposes only. It should not be viewed as a solicitation for the referenced system or vendor. While the information and statistics within this website are believed to be complete and accurate, we cannot guarantee their completeness or accuracy. As past performance does not guarantee future results, these results may have no bearing on, and may not be indicative of, any individual returns realized through participation in this or any other investment.

4. Activate Licensed Systems for *LIVE Trading* in Your Account, Selecting How Many Contracts Per Signal...

Activation Confirmation
You are activating the following system on your account

System name: EuroStoxx H1
Product and timeframe: Intraday on FESX future. Max Open Position: 1
Current Position: Closed (last updated 01/09/2014 18:00)
Account: DEMO20
Required margin: 800 USD
Multiplier: 1
Activation mode: Immediate Activation

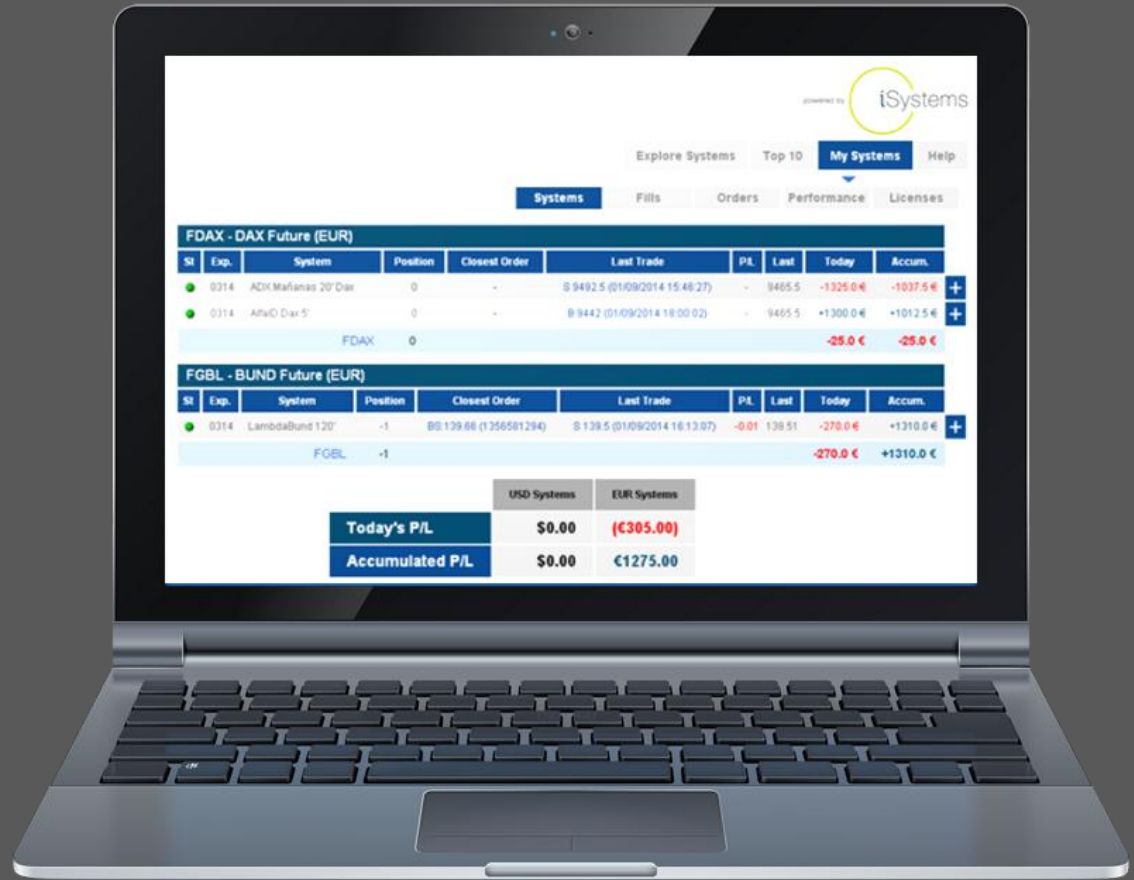

You are about to activate the system EuroStoxx H1 in your Attain Capital Management account number DEMO20. The number of contracts traded on all signals will be multiplied by your chosen multiplier. For example, if your chosen system trades 2 contracts per signal and you have chosen a multiplier of 4, then 8 contracts (2*4) will be executed on the next signal.

Upon activation, and on every subsequent trading session the system remains active, we will instruct

I accept the above terms and conditions; and understand the risks outlined in the [risk disclaimer](#).

OK **X**

Fully

automated

[LEARN MORE](#)

No Emotions

Very few traders can successfully control greed, fear and panic in their trading; letting those emotions leak into their trading decisions. Automated trading systems don't have an opinion and don't have emotions – they stick to the rules no matter what is happening around them, providing a more objective and reliable approach to trading.

Fully Automated

Systems run automatically, without the need for you to be glued to the computer, with the algorithms reacting to price movements and placing orders as needed. All you need to do is activate a strategy, and it will run day in and day out until you deactivate it – while you can monitor your performance and make any needed changes to your portfolio in real time.

Diversified - Trading strategies come in many different shapes and sizes, some preferring to pick market tops and bottoms, while others are coded to ride the day's momentum one way or the other. They also run on dozens of markets spanning different countries and asset classes, with everything from Euro Bunds to Crude Oil to the eMini S&P futures.

10 Years in the Making...

The Madrid based creator of the iSystems Platform has offered automated trading systems to investors since 2002. After years of perfecting their execution technology, expanding the number of available systems, and providing better tools for their analysis; the platform is now available to US investors.

Reliability

To insure the fastest and most fair execution available, every trade is sent to the exchange via a direct connection, and sent in random order to assure no one account gets preferred treatment. Once a trade is filled, clients can see the best, worst, and average price received across all accounts trading each strategy. The mission of the iSystems platform is to insure the performance you receive in your account lines up with the performance you see on the platform.

Server-Based Execution

iSystems sends orders direct to the futures exchanges within milliseconds of a trading system generating a signal, running the trading algorithms on the same servers as the order routing technology to remove the latency which comes from building charts or running system code on a remote machine which then must transmit orders to another machine.
